### SECTION 11 Toxicological information

#### Information on toxicological effects

##### Inhaled:

The material is not thought to produce adverse health effects or irritation of the respiratory tract (as classified by EC Directives using animal models). Nevertheless, good hygiene practice requires that exposure be kept to a minimum and that suitable control measures be used in an occupational setting.

- Hazard relates to dust released by cutting, grinding, trimming or other shaping operations.

##### Ingestion:

Not normally a hazard due to the physical form of product. The material is a physical irritant to the gastro-intestinal tract

##### Skin Contact:

Not normally a hazard due to physical form of product.

##### Eye:

Not normally a hazard due to physical form of product. Generated dust may be discomforting

##### Chronic:

- Hazard relates to dust released by cutting, grinding, trimming or other shaping operations.

Long term exposure to high dust concentrations may cause changes in lung function (i.e. pneumoconiosis) caused by particles less than 0.5 micron penetrating and remaining in the lung. A prime symptom is breathlessness. Lung shadows show on X-ray.

Long term inhalation of dusts containing crystalline silicas may lead to silicosis. Effects are cumulative, with nodular fibrosis, respiratory impairment, emphysema, even restriction, obstruction of lung function in severe cases.
